Restaurant Challenges

The Restaurant Industry is a constantly evolving business that continues to create new problems as it progresses. Customers are plagued with long wait times and high expenses. Waiters are over worked and harassed if they take an order incorrectly. Managers and owners need to have eyes everywhere at all times to make sure the business is running smoothly.

The SpeedyByte Solution

SpeedByte has a solution catered to each individual aspect of the restaurant experience within on easy to use app. With a few, simple, quick clicks, the aggravation of going out will be in the past, along with 8-tracks and Walkman's.

Manager Benefits

Measuring the success of a business can be challenging, even for the veterans of the food industry. SpeedByte offers numerous functions to make this difficult task as simple as pie. With features such as "Stat Tracking" the manager will be able to view visual representations of both the successful, and problem areas of their restaurant.

Customer Benefits

Customers are often plagued with the unknown variables that a restaurant has to offer such as wait time and the quality of a specific dish. SpeedByte offers solutions to both with its interactive menu which shows wait times of each dish as well as previous customer reviews.

Employee Benefits

Putting emphasis on staff happiness and a more stream line job can decrease turn-over rate and increase customer satisfaction in restaurants. Using SpeedByte 'Table Status' and 'Food Status' commands. Employees are able to check on tables and food orders. Also, there is a messaging system that will allow employee to request off and request coverage by fellow co-workers.
